*Results obtained from a third-party professional assessment based on a 24-hour in vivo study performed on 32 healthy female and male subjects aged 18 and over. The moisturisation level of skin was measured using a corneometer in three areas; one area where Dew all day had been applied, alongside two areas for positive (glycerine) and negative (untreated) controls. The percentages were obtained by comparing the results of the untreated area and area featuring Nutricentials Dew All Day.
